Clinical Variation in Practice of Cholecystectomy and Surgical Outcomes: a multi-centre, prospective, population-based cohort study (CholeS Study)

This is to confirm that:

.....

collaborated and provided a valuable contribution to the CholeS study.

The CholeS study prospectively collected data from 166 hospitals in the UK and Ireland on over 8900 patients who underwent Cholecystectomy and is the largest cohort study ever conducted on this topic in the UK.
